

BIOL 240 : Global Change and Arctic Biology

Exploration of the ecological impacts of climate change through Arctic field biology. Includes a survey of Arctic ecosystems, with emphasis on the interaction between climate and the ecology of Arctic organisms. Following a semester-long survey of the natural history of the Arctic, students will complete field projects during an expedition above the Arctic Circle.

Semester Hours 4.0

Prerequisites

Instructor permission and one course from the following: BIOL 105 or BIOL 117, ESCI 112, ENVS 100, or GEOG 311.
