

NURS 403: Evidence-Based Practice and Nursing Research

Evidence Based Practice is a process used to review, analyze, and translate the latest scientific evidence and is the cornerstone of clinical practice. Integrating Evidence Based Practice into your nursing practice improves quality of care and patient outcomes. Students will identify the steps of evidence practice, appraising quantitative and qualitative evidence for clinical practice, and moving from evidence based practice to sustainable change in professional nursing practice.

Semester Hours: 3

Program: Nursing
